Independent Projects

Remedify (Node.js) – Remedify is a REST API that stores data on MongoDB regarding a person's illness and provides natural remedy solutions. Data was acquired through my python web crawler and was accompanied by an iOS app to display the usefulness of the API on a sample project.

Fall '18

Dr. Alexa (Node.js) – Learned how to create and implement AWS Lambda functions that allowed Alexa to identify basic illnesses depending on the person's symptoms.

Fall '18

Cipher Texts (Python) – Cipher Texts is a program made with Python that receives the user's desired encoded text and encrypts their information with the choice of a Vigenere, Caesar, or Rail Cipher.

Fall '17

X-Spend (Swift) - X-Spend is a financial app created to keep track of expenses while sharing spending habits with both the user and friends or family members.
